Our goal

is to work towards a better world
and a brighter future for our children

We protect life,

seas and animals with a sustainable
production

Recyclable products

with the culture of awareness and
conscientious disposal

With the utmost respect for our environment and life

Since 1992 we have been producing thermoplastic articles, stamping and extruding them for the construction market, as well as for the school and hospital sector, with a special focus on the DIY market. Our production is sustainable, respecting and protecting the environment to the utmost degree. Knowing that there is still a lack of conscience in our sector, we try to educate people by promoting the value of plastic, introducing it as a material that can and has to be reused and recycled for as long as possible. We transform energy into products that will then produce energy themselves, thereby creating an additional source of energy. Thus, our production is neither wasting resources nor polluting the environment. We stand for a new culture of the life and the evolution of products over time, contemplating its conscientious disposal. Our goal is to seek and research connections, insights and solutions, trying to pass on a culture of awareness and sustainability to posterity and our children, for a better world and brighter future.

RECYCLABLE MATERIALS

Quality is the essence of competitiveness, environmental sustainability its excellence. All the production scraps are reused and incorporated into the production cycle.

AN ECO-FRIENDLY PRODUCTION

Always attentive to the green engineering, we employ photovoltaic installations in order to realize a self-sufficient production, with a low energy consumption.

A WHOLLY ITALIAN PRODUCTION

Trafilplast products born in Osasio (Turin) from an all italian production of the highest quality.

● **High and certified fire protection**

The passive fire protection increasingly needs complete, safe and certified solutions. All our finished products are strictly tested and complemented by certifications required by the regulations in terms of fire safety. Certifications of fire resistance are available on request.

● **Material suitable for use in hospital structures, assistance structures and sanitary structures in general, as well as in environments where foodstuffs is being processed.**

Our plastic material is entirely waterproof, smooth, washable and sterilizable. It doesn't release chemical substances under normal conditions of use and it is not affected by the use of traditional cleaners and degreasers.

It is recommended

-  to use a double-spread glue for flexible PVC
-  keep warm ($\approx 18^{\circ}\text{C}$) 24 hours before using

The special consistency and flexibility of the material make it suitable for all surfaces. It is easy to cut and place.

Scotia

Sanitary PVC scotia between two walls or between floor and wall

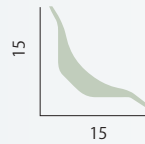

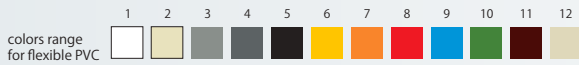

- Material suitable for use in hospital structures, assistance structures and sanitary structures in general, as well as in environments where foodstuffs is being processed. Our plastic material is entirely waterproof, smooth, washable and sterilizable. It doesn't release chemical substances under normal conditions of use and it is not affected by the use of traditional cleaners and degreasers.

transparent wall guard

500X80

800X80

WALL GUARD 500X80

Height 80 mm | length 500 mm | thickness 4 mm
Pack: 50 pieces

Code 1B1 transparent, 1B2 white, 1B3 smoke-grey, 1B4 ivory
Code 1B1B transparent, packed separately with bar code.

WALL GUARD 800X80

Height 80 mm | length 800 mm | thickness 4 mm
Pack: 50 pieces

Code 1BS1 transparent, 1BS2 white, 1BS3 smoke-grey, 1BS4 ivory
Code 1BS1B transparent, packed separately with bar code.

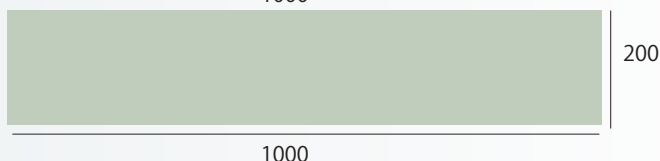

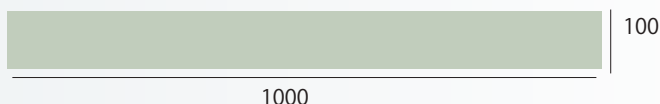

The application is extremely simple: just drill a hole of \varnothing 5 mm. Put the screw anchor (supplied with the assembly kit) in the hole, carefully remove any dust from the wall using a cloth and finally apply the wall guard using its screws. The assembly kit is included in the package (screws and screws anchors).

custom-made
 decorations

Use:
 Light switch finger plates are particularly suitable for use in homes, offices, waiting rooms and crowded public places. The transparent version is suitable for any type of furniture. The application is extremely simple: just put the light switch finger plate between the wall and the light switch cover without using glue or other fixing agents.

Polycarbonate

Transparency, thermal insulation and resistance

The polycarbonate is a techno-polymer with excellent features of transparency, thermal insulation and crash resistance. The particular multiwall structure of the sheets optimizes all these features and makes it suitable in residential and industrial building applications. The external side of Polycarbonate is coated with U.V. protection warranting resistance to aging due to atmospheric agents and UV rays.

Crystal **multiwall polycarbonate sheets**

MULTIWALL POLYCARBONATE SHEET

Technical features: linear thermal expansion: 0,065 mm/m °C

Temperature range: from -40 °C to +120 °C
U.V. Protection, fire reaction EuroClass Bs 1 d0

Use: roofing, windows, skylights, greenhouses, porches, gazebos, ceilings.

Drilling: the sheets can be drilled by means of standard helical bits for metal. Holes have to be distant at least 40 mm from the panel's edges; the diameters of the hole must be larger than its anchoring system in order to allow the natural expansion of the material. Consider the thermal expansion when installing (0.065 mm/m °C).

Cutting: use an alternative hacksaw, a band or a circular saw, with a fine-tooth blade or a cemented carbide blade.

Handling: avoid exposure to direct sunlight and rain to prevent any excessive build-up of heat in the packaging or the formation of condensation in the cells.

Safe crystal

Self-extinguishing, light and safe

Solid Polycarbonate sheets have excellent mechanical, thermal and electrical properties. They are flexible and shock resistant, they provide a higher thermal and acoustic insulation than common glass. The lightness (A solid polycarbonate sheet weighs 50% less than a sheet of glass of the same thickness) allows to reduce the weight in building applications. The advantages of solid polycarbonate sheets are: self-extinguishing, safety, lightness, light transmission, U.V. protection.

MULTIFUNCTIONAL

Sheet 2000x3000 | thickness 2-3-4-5 mm
Pack: 1 pcs

Code LCP2C2000X3000

Technical features:

linear thermal expansion: 0,065 mm/m °C

Temperature range: from - 40°C to +120 °C

U.V. Protection, fire reaction EuroClass Bs 1 d0.

Colors available on request: opal and bronze.

Use: roofing, windows, skylights, greenhouses, porches, gazebos, ceilings.

Installation: solid polycarbonate sheets can be installed in most PVC, wood, steel and aluminium structures and frames. The frame must hold the sheet in place while allowing it to expand.

Drilling and cutting: the sheets can be drilled by means of standard helical bits for metal. Holes have to be distant at least 40 mm from the panel's edges; the diameters of the hole must be larger than its anchoring system in order to allow the natural expansion of the material. Consider the thermal expansion when installing (0.065 mm/m °C). Use a saw with a blade specific for plastics or a circular saw with a cemented carbide blade.

Handling: Avoid exposure to direct sunlight and rain to prevent any excessive build-up of heat in the packaging.

Cleaning: we recommend the use of water and neutral detergent only. Do not use abrasive products.

Safe crystal

custom-made
(cuts to size)

Safe mirror

Unbreakable and reflective

Excellent optical, flexible and resistant properties

Safe mirror

UNBREAKABLE

Colors available: transparent

Drilling and cutting: sheets can be drilled using standard drilling machines. Drill a hole of 1.5 mm diameters. It will be larger than the diameter of the screw in order to consider the sheet expansion. Install the sheet correctly in order to prevent breaks. Remove the protective film after cutting only. Use a saw with a blade specific for plastics or a circular saw with a cemented carbide blade. Avoid exposure to direct sunlight and rain to prevent any excessive build-up of heat in the packaging.

Cleaning: we recommend to use water and neutral detergent only. Do not use abrasive products. Dry gently using a soft cloth. Do not use alcohol.

Use: dressers, walls, ceiling, pillars and floorings.

Synthetic glass

High-resistant and luminous

Polystyrene solid sheets have excellent mechanical properties and high resistance to the thermal expansion due to heat, they are high shock resistant, easy to work and apply. Highly transparent and luminous, these products offer innovative solutions.

custom-made

anti-reflective glass and cut to size available on request

RESISTANT

MULTIFUNCTIONAL

LUMINOUS

Synthetic glass

POLYSTYRENE SOLID SHEETS

Use: frames for pictures, poster, photos, screens, home improvement, interior glasses and shower boxes
Cutting: cut by a box cutter or hacksaw
Drilling: use bits for wood or iron
Bending: it can be bend by means of a heat gun
Fixing: use special glue or silicone

Easy to decorate. Recommended for interior environments.
Cleaning: we recommend to use water and neutral detergent only. Do not use abrasive products.

ANTI-REFLECTIVE GLASS
 and cut to size

MADE-TO-MEASURE

SHOCKPROOF

tube-shaped radiator cover

SAFETY BARRIERS FOR THERMAL PROTECTION

Radiator Covers are available in four models:

Tube-shaped CTT

Tube-shaped standard series CTTB

Tube-shaped reinforced series CTTTR

Playground activity panels for radiator cover (CTG) (Trafil patent)

The tube-shaped structure is manufactured in non-toxic, acrovynil and fireproof PVC, Class 1. External supporting structure has a diameter of 50 mm and thickness of 2 mm. Internal tube-shaped structure with 32 mm diameters and thickness 2 mm. Playground activity panel in expanded PVC, thickness of 3 mm. The quality of the materials guarantees safety and stability. The distance between the vertical tubes complies with the international standard UNI 108090 to guarantee the impossibility to pass through the barrier. The hot air distribution is assured by an open structure in both tube-shaped and playground activity panel version.

Use: protection for kids in the event of accidental impacts, we recommend the use in schools, kindergartens, playgrounds, baby parking and game rooms.

Installation: modular structure according to measurements required, brackets childproof, interlocking connectors of the same color of the structure.

External supporting structure: tube of Ø 50 mm blue and white.

Internal tube-shaped structure: tube of Ø 32 mm red, blue, yellow, green and white.

Playground activity panel for radiator cover: white (toys are not included), white, blue and red connectors.

Cleaning: clean with water and neutral detergent.

Terminal

Joint

WALL PROTECTION

Height 130 mm | length 2000 mm | width 13 mm | Pack: 30 meters. Wall protections are made in PVC: PVC is self-extinguishing, shockproof, environmentally-friendly and recyclable.

Application: Fix the special support profile (supplied with the assembly kit) with screws and screws anchors, then apply pressure to install the wall protection. It is possible to put electric or telephone wires inside the profile using its specific separate internal spaces. Connecting joints and terminals are available. The number of terminals and joints depends on the number of wall protection being used.

Use: PVC wall protections are particularly suitable to use in homes, offices, waiting rooms, rest homes, hospitals, schools, supermarkets, workshops and wherever walls are particularly exposed to possible damage. PVC is class V0 fireproof. Special colors are available on request

shockproof

standard colors

The colors are mixed within the raw materials.
Cadmium and heavy metals free.

Features:

- Acrovynyl profiles with tin shockproof
- Fine embossing materials
- "V0" nylon terminals, non-halogen non-carcinogenic
- No bacterial growth
- Class 1 fire-safe
- Support profile in extruded aluminium

SURCHARGE

Extra charge will be applied for red, dark green and aluminium colors

Slight color variation can occur between acrylic-vinyl profile and "V0" nylon elements DUG different materials and processing.

Used materials meet European directive 2002/95/CE January 27, 2003, aligned with RoHS standard for plastic materials (unleaded and without heavy metals). The materials comply with EU rules and with RoHs Rule about plastics.

Research and Custom-made design

The future of plastic

We are in constant evolution, collaborating with research and innovation centres, trying to find new polymers and more innovative processes. Plastic is an environmentally-friendly material and when correctly disposed and reused, plastic is also a sustainable resource.

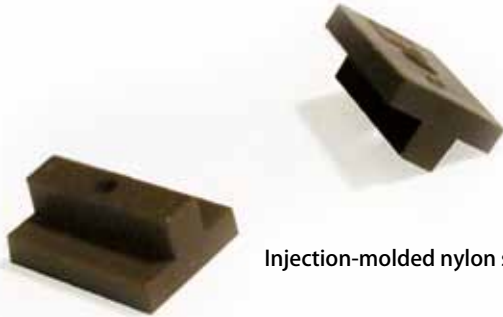

Custom-made design

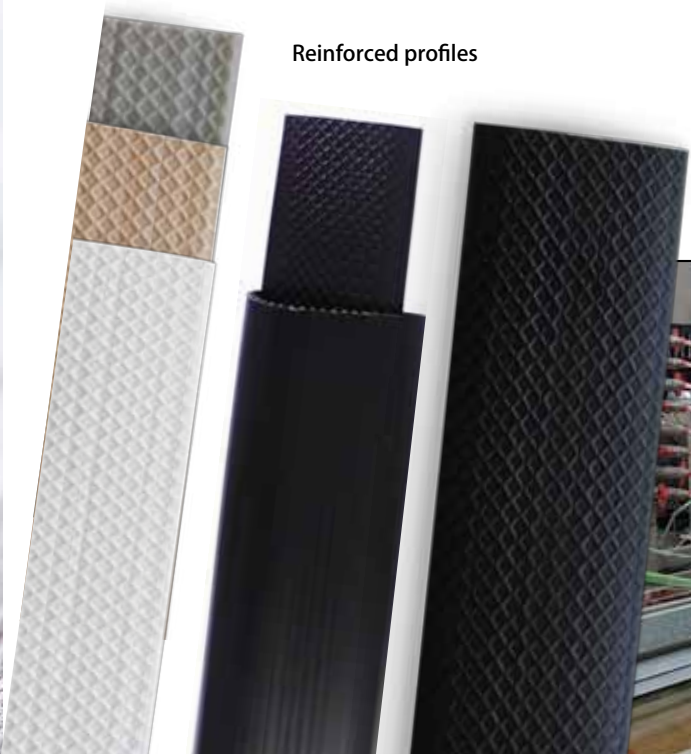

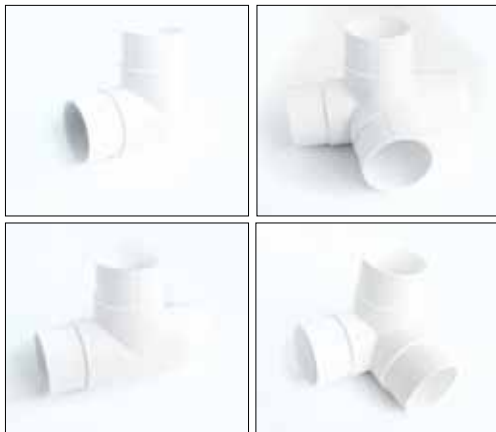

We plan, extrude, and print profiles and thermoplastic articles according to our customer's wishes. We offer customised colours (RAL), measures and packaging.

Anti-dust flexible PVC profile

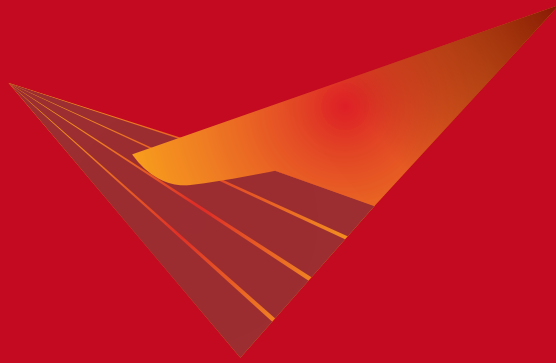

Injection-molded nylon slider

Reinforced profiles

1.SUBJECT

These terms of Sale and Delivery shall apply to sales contracts and supplies contracts (hereinafter referred to as "Contract products"). General conditions of purchase of the buyer shall not apply to these contracts.

The Customer provides the Supplier with specific written orders including features of the required product, its price and terms of delivery. Orders shall be binding on the Supplier only after having received a written confirmation from the Customer.

2.PRICE LIST

Prices applied for each sale are those applicable on the date of the order. Prices do not include packing costs, delivery prices, insurance costs and any further charges (fees, taxes, etc.). Rates may vary with immediate effect, without prior notice. All payments shall be made in Euros.

3.COMMISSION

Any offer shall be valid only if prepared at the currently valid costs of material and wages. Orders shall be binding on Trafilplast srl only after having received a written and signed confirmation from the Customer. Articles, measurements, quantities and colours shall be checked by the Customer, who accepts full responsibility.

4.INFORMATION AND STRUCTURAL FEATURES

All measurements and capacities of the goods quoted in all offers and order confirmations shall be considered as approximate. In particular, no good can be rejected in execution of the contract, objecting the application of changes which have been introduced after the conclusion of the contract. The Supplier shall not be required to amend products after the order.

5.CUSTOM PACKAGING

Any supply request in customized packaging will be subjected to surcharges.

6.SHIPPING

Shipping is regulated by Incoterms 2020. Sales are concluded under FCA.

7.DELIVERY

Unless otherwise agreed, the delivery of the Contract products takes place at the premises of the Supplier. The period of delivery shall start from the date on which the Supplier has received the signed order confirmation. All delivery dates shall be non-committal. The period of delivery shall be stipulated for each individual case upon placing of the order.

Potential delays shall not be eligible for refunds, compensations or cancellation of the transaction. The Supplier shall not be liable for delays caused by force majeure, including claims, machine faults, strikes, lack of raw materials supplying, etc. On transferring the goods, the Customer assumes responsibility for risks inherent to Contract products. If the Customer does not take charge of the Contract products within 7 days following their readiness, risks shall pass over the Customer upon receipt of the report of Supplier's readiness to dispatch the Contract products and the costs of custody are at the complete charge of the Buyer. Once the deadline of 7 working days, mentioned above, expires, the order is deemed automatically cancelled. The Supplier has to send a written communication of the contract resolution that has to be sent by certified letter or equivalent, notwithstanding the right to compensation for any damage incurred.

8.PAYMENT

All payments shall be made by advanced bank transfer.

9.DELAY OF PAYMENT

In case of delay in payment caused by the Customer, the legal rate of interest calculated, based on Legislative Decree n. 231/2002 and subsequent amendments, will be charged. Until all outstanding amounts including dunning costs and default interest have been paid, the Supplier shall not be obliged to make any further delivery under current orders.

10.WARRANTY

The Supplier shall give a warranty period of 12 months as of the date the goods are delivered. The Customer shall check the Contract products at the moment of delivery, in the presence of the carrier, to verify whether there are damages or shortfalls. In such circumstances, the Customer shall affix "Subject to SPECIFIC control" on the carrier document. The document can be both printed or electronic, in both cases the Customer shall be accurate with the goods unchecked, for example damaged goods, unwrapped goods, broken goods, etc. The Customer shall take photos of damaged goods and promptly report it to the Supplier. The Customer will not be able to file a claim for all unchecked goods received with general control. Any flaws or defects will not imply the contract resolution or the right of the Customer to claim compensation. In case of damages, if not required by mandatory law, the Supplier's liability is excluded.

11.CONDITIONS OF WARRANTY APPLICATION

Any defects must be reported within seven (7) days from their discovery.

Otherwise, the Customer shall lose his warranty rights if:

- a. He receives goods, does not check them and does not promptly report it to the Supplier;
- b. The price is not paid within the timeframes agreed;
- c. Terms and Conditions provided by the Supplier are not complied with;
- d. Contract products are modified without the approval of the Supplier or repaired by third party, unrelated to the Supplier's assistance.

In case of valid communication under warranty, the Supplier will exclusively replace the product recognized as defective, that has to be returned to the Supplier in its original condition, intact and undamaged. In the event of complaints or returns, the Customer shall not be allowed to suspend pending payments.

12.RESTRICTION TO THE USE OF TERMS AND CONDITIONS

The Customer shall not use purchased Contract products for any use other than its intended use. Any responsibility arising from the improper use, even if permitted by the Supplier, shall be borne exclusively by the Customer. Non-compliance with this prohibition implies the immediate expiry of the right to the warranty of the Customer.

13.TOLERANCES

Any measurements and capacities of the goods shall be considered as approximate. They may vary as shown in Table DIN 16491-3B and 16491-4B. The weight of the products is never binding.

14.RESERVATION OF TITLE

In case of deferred payments, the Supplier has the right to retain title to the goods until the purchase price has been paid in full. Despite the reservation of title from the Supplier, any risk on goods shall be assumed by the Customer from the conclusion of the contract. This reservation shall be affixed on all Supplier's invoices of subsequent deliveries and registered on all accounting entries where the good is intended to move further.

15.GOVERNING LAW AND COURT OF JURISDICTION

Any disputes arising out of or in connection with these Terms of Sale and Delivery (Agreement), shall be subjected to the exclusive jurisdiction of the city of Turin Law Court, excluding other Law Courts. For any doubt and/or interpretation relating to these Terms of Sale and Delivery (Agreement), only the Italian Law is binding, excluding other Laws or International Conventions.
